Credit Card Transaction Analysis

Credit Card Transaction Analysis

- Overview: Analyzed credit card transaction data to derive insights into spending patterns, identify trends, and optimize business strategies.
- Methods: Developed SQL queries to perform various analyses, including identifying top spending cities, determining highest spend months by card type, and analyzing transaction details for specific criteria.
- Techniques Used: Aggregation, ranking, filtering, and cumulative calculations were employed to extract meaningful insights from the dataset.
- Outcomes: Generated actionable insights such as identifying top spending cities, highest spend months for different card types, and analyzing spending patterns by expense type and gender.
- Impact: Provided valuable insights to stakeholders for strategic decision-making, targeting marketing efforts, and optimizing business processes.
